

Packaging **Experience** **PET**

PET

Who are we?

45 years of packaging experience

FlexPET a subsidiary of Frapak, is a leading packaging manufacturer and distributor, owning factories and warehouses in various European countries. Recognised for its technical capabilities Frapak supplies both standard and custom designed bottles and jars in PET, PP, HDPE and glass, as well as having a wide selection of sustainable material options. Our vision is that design only in combination with functionality and sustainability will create the perfect packaging solution.

HDPE

What do we offer?

Growing portfolio

Family owned since 1978, Frapak is proud to be a dynamic business with an enthusiastic team of people whose vast experience aims to give our customers the very best support. We constantly adapt our product range to the changing needs of the market, and have a standard packaging portfolio of bottles, jars, closures, and pumps to suit the needs of most brand owners, contract fillers and retailers.

Added value

Appreciating that speed to market is key for our customers, Frapak aims to develop new packaging concepts within 12 weeks utilising our in-house technical laboratory, 3D design and prototyping capabilities. Our expertise not only ensures that all the fundamental functional aspects of your packaging are met, but we aim to enhance your overall packaging by offering our in-house metallisation, lacquering, printing, or hot stamping decoration capabilities.

Custom moulding

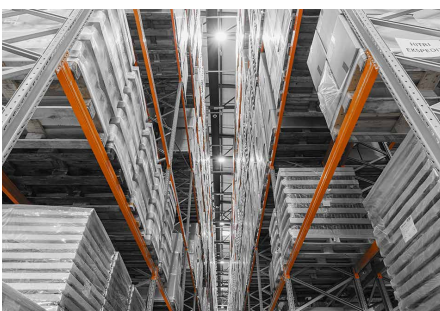

Matching closures

Decoration

Service levels in supply chain are achieved by the using state of the art ERP systems in combination with a network of warehouses close to our customers.

Warehouse and distribution

Sustainable approach

The EcoDesign Requirements

Extending product life cycle

Reducing carbon and environmental footprints of products throughout their life cycle

Ensuring products are fit for a climate neutral and circular economy

Preventing waste and boosting material recovery

Minimum uptake of recycled materials

The Ecodesign rules originating from the Green deal sets a framework of requirements regarding reusability, recyclability and the reduction in the use of resources. The framework also sets the information requirements with regards to relevant substances and the way in which it should be reported by means of a Digital Product Passport.

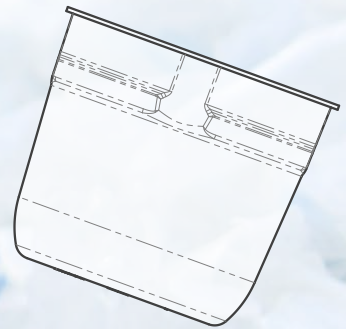

Re-Fill

The development of refill solutions plays an important part for those brands looking to achieve the lowest overall LCA for their packaging, whilst enabling multiple re-use of the primary packaging.

Re-Cycle

PET is clear, durable and the most recycled plastic in Europe. The ultimate goal within standard PET ranges is to design the optimum preform to serve a wide range of product solutions. When a specific PET container is developed the preform is designed in such a way to ensure the bottle is produced at the best quality possible.

Re-Duce

Reducing the need for natural resources increase the use of recycled plastics in packaging through mandatory targets. These targets have been generally set as follows 2030-5% ; 2035 - 10% and 2040 - 15%.

RecyClass

RECYCLING
PROCESS

RecyClass

100%
RECYCLED
PLASTIC

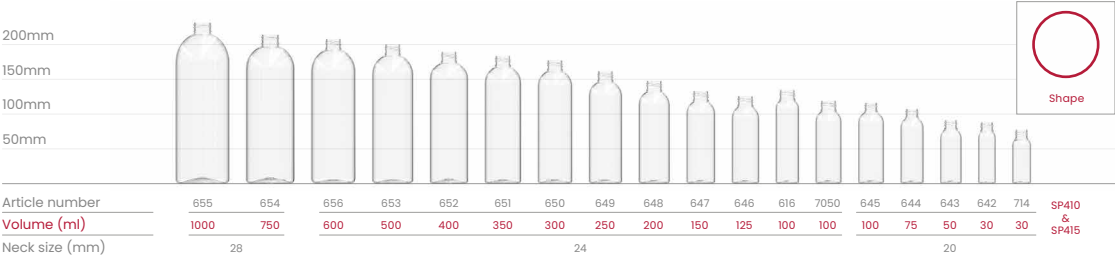

EN15343

Certified recycled content

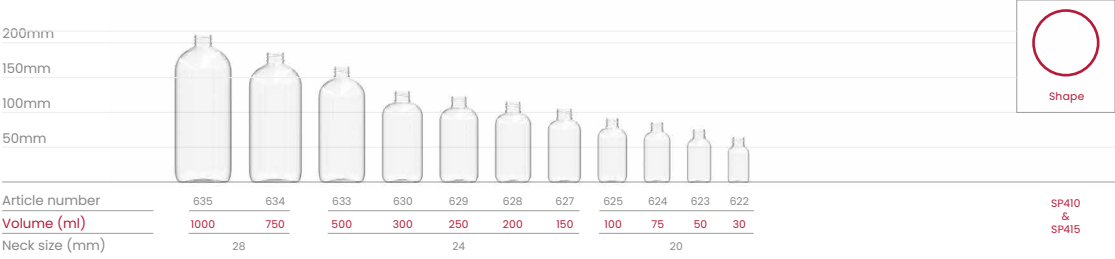

The increase in the use of recycled plastics can only be monitored when the chain of custody is respected throughout the value chain. Our factories fully comply with the latest norm EN15343 regarding this subject which is obligatory for products supplied to Spain and the UK.
